- **docker ps -a -q** command is used to print all the IDs of the containers

```
[root@ip-172-31-40-68 ~]# docker ps -a -q

```

- Trick to remove all the containers in one go
 - Command:- **docker rm -f \$(docker ps -a -q)**

```
[root@ip-172-31-40-68 ~]# docker rm -f $(docker ps -a -q)

```

- Docker automatically gives the Ip address to each container

- By default, the container has connectivity with the base system

```
[root@ip-172-31-40-68 ~]# ping 172.17.0.2

```

- By public IP anyone in the world can connect to the operating system
- Any server in the world that can connect with the outside world and they are running a program & every program they give a unique number known as a port number
- **netstat -tnlp** command is used to check the port number

```
[root@a266e89cd9d3 html]# netstat -tnlp
Active Internet connections (only servers)
Proto Recv-Q Send-Q Local Address           Foreign Address         State       PID/Program name

```

- By default, the container is isolated it cannot connect to the outside world
- Connecting container with the outside world
 - Giving the container a port number & volume

```
[root@ip-172-31-40-68 ~]# docker run -it --name web -p 1234:80 -v /code:/var/www/html centos:7
[root@1015889037dd /]#

```

- Installing Apache web server in a container

```
[root@1015889037dd /]# yum install httpd -y
Loaded plugins: fastestmirror, ovl
Determining fastest mirrors
```

- Starting webservices
- Anyone in the world can access the website just have to type the protocol name, IP address, and port number

- **-d** keyword in the run command is used to launch the container in detached mode

```
[root@ip-172-31-40-68 ~]# docker run -it -d --name w2 httpd

[root@ip-172-31-40-68 ~]#
```

- **docker inspect (container name or ID)** command is used to see the details about the container

- In the terminal, we can create variables that are called user-defined variables

```

[root@ip-172-31-40-68 ~]# x=5

- We can set the environmental variable in the container with the **-e** keyword in the run command

```

[root@ip-172-31-40-68 ~]# docker run -it -e x=5 centos:7
